

MASSON CORLETTE

FULL STACK DEVELOPER

Columbus, IN | 317-629-2669 | massoncorlette07@gmail.com

linkedin.com/in/masson-corlette | github.com/mass0n30

Full stack developer building deployed applications that turn operational needs into practical software. Combines system design, relational data modeling, workflow automation, and hands-on debugging with deliberate tradeoffs around performance, maintainability, and delivery scope.

TECHNICAL & ENGINEERING SKILLS

Stack: JavaScript, React, Node.js, Express, PostgreSQL, SQL, Prisma, HTML/CSS, Tailwind.

Systems & delivery: REST APIs, role-based authorization, Git/GitHub, Vercel, Railway, cron, IMAP/CSV.

Debugging: Postman, browser developer tools, logs; tracing UI, API, authentication, and database issues.

AI-assisted engineering: Scope tasks, supply code context, review suggested changes, and verify behavior while retaining architecture and implementation decisions.

SELECTED PROJECTS

ShelterLedger (Shelter Resource Tracker)

React | Node.js / Express | PostgreSQL / Prisma | Tailwind

- Translated shelter intake, referral, and follow-up needs into a case-management application, owning the React interface, REST API, relational schema, and deployment.
- Designed client status and timeline models with role-based API authorization, keeping business rules in the backend and presenting consistent state in the UI.
- Automated nightly roster processing through IMAP, CSV parsing, and scheduled jobs; matched records to clients and updated stay status, with manual upload as a fallback.
- Traced redundant dashboard work across API and UI updates; moved data mapping to the backend and used Map lookups to reduce repeated processing.

RetroGamingAtlas

- Integrated external game, video, pricing, and speedrun services into an application covering 25,000+ games, normalizing data into consistent records and UI states.
- Implemented pagination, infinite scrolling, and combined filters to balance discovery features with responsive rendering and data-fetching cost.

Full Stack Messaging Application

- Modeled users, chat rooms, direct messages, and attachments with authenticated REST APIs and protected access.
- Used polling for message updates, choosing a simpler deployed implementation while deferring WebSocket infrastructure until requirements justify it.

EXPERIENCE

Housing Support Staff | Brighter Days Love Chapel

Oct 2023 - Present

Columbus, IN

- Managed intake documentation, resource coordination, and shift reporting; used firsthand workflow observations to define requirements for ShelterLedger.

Owner / Operator | Window Washing & Videography

Jan 2019 - Present

Self-Employed | Indianapolis, IN

- Managed client requirements, estimates, scheduling, invoicing, and service delivery for window washing and videography; built repeat business through referrals.
